

## Bottom structure

### Hardbottom and unconsolidated sediment

This map offers a look at the basic bottom structure of Guam's nearshore habitats, differentiated here in simple hardbottom vs. softbottom (unconsolidated sediment) categories. The geospatial data are directly from the Benthic Habitat Atlas by Burdick, D. (2006). Overview, background information, and methodology used in creating these data are available at <http://guammarinelab.com/coastal.atlas/index.htm>.

- Coral reef and hardbottom
- Unconsolidated sediment

Cartography and design  
by Danko Taborosi  
and Maria Kottermair,  
2015.
