

Bare land (from detailed land cover map, 2011)

 Bare land

This map shows the bare land in southern Guam and includes areas whose surface is composed of bare soil, rock, sand, silt, gravel, or other earthen material with little or no vegetation. It also includes burned areas, which are frequent in southern Guam, especially during the dry season. The geospatial data were derived from data are the land cover classification by NOAA Coastal Change Analysis Program (C-CAP) (2011). For more information see C-CAP website (<http://www.csc.noaa.gov/digitalcoast/data/ccapregional/>).

Cartography and design
by Danko Taborosi
and Maria Kottermair,
2015.
