

Closed-contour depressions (contour lines)

 Depressions

This map shows the horizontal and vertical extent of closed-contour depressions in southern Guam. The map source is Taboroši, D. (2002), Karst features of Guam [MSc thesis], University of Guam, Mangilao, 324 pp. The contours were derived from a topographic contour file for the entire island of Guam by manual editing in which all features except closed contours were removed. The depressions shown on the map include depressions of a variety of origins: karst sinkholes, low-lying areas in the primary depositional surface, quarried areas, and other types.

Cartography and design by Danko Taboroši and Maria Kottermair, 2015.

This map is for awareness and educational purposes only. It contains no authoritative positional or other information. See the full disclaimer at www.south.hydroguam.net/disclaimer.html

Created by the Water and Environmental Research Institute of the Western Pacific (WERI) and Island Research & Education Initiative (iREI) with funding from the Guam Hydrological Survey (GHS) and the Bureau of Statistics and Plans (BSP), Government of Guam.
