

Limestone soils

 Limestone upland soils

This map offers a very simplified look at the soils of southern Guam. It shows only the extent of soil of limestone origin. It was derived from the detailed soil map published in the Soil Survey of the Territory of Guam (1985), by the USDA Soil Conservation Service (SCS, but now NRCS – Natural Resources Conservation Service) in cooperation with Guam Department of Commerce and University of Guam (UOG). This dataset was created by Island Research & Education Initiative for the purposes of this atlas.
